

TRENT BOSCH STABILIZER - BLACK OXIDE UPGRADE INFORMATION SHEET

Below you will find some more info about the Black Oxide Upgrade Process. Please don't hesitate to contact Trent if you have any questions.

FAQS

IS IT OKAY IF MY STABILIZER IS RUSTY/CORRODED? This is not a problem, and actually one of the main reasons to add the Black Oxide coating. After the process is complete your Stabilizer will be free from all rust/corrosion.

WHAT ARE THE BENEFITS OF THE BLACK OXIDE COATING? The two main advantages to the black oxide coating are it adds a layer of protection and prevents corrosion. This is helpful for everyone, but even more useful for those of us in humid environments or those that turn green wood.

PACKING AND SHIPPING

When you prepare to pack your Stabilizer and sent it to us, be sure to use an appropriate sized box and wrap well in packing material. We suggest using newspaper, packing paper, foam, bubble wrap, cardboard, etc. to make sure your Stabilizer will make it to us safely. We suggest packing the box, but before putting the final tape, shaking it to see if you can feel the Stabilizer moving around, if you can, you need to add more packing material.

It is your responsibility to pack and ship your Stabilizer to us, return shipping (within the US) is included in the cost of the upgrade.

TIMELINE

We blacken tools as they are received. Place your order online, ship your tool(s) to us, and we will return them within 2 weeks (likely even quicker).

PROCESS

When we receive your Stabilizer in the mail, we will take it apart, tumble the pieces and go through the black oxide coating process. If we find any parts that need repair/replacement we will contact you to discuss the options, but do note that we do not think this will be necessary in most cases. Once blackened Stabilizer will be engraved, re-assembled and shipped back to you.
